[P. 398, A]

764 The dispute between the widow and the sister mentioned
[578] earlier was an argument as to whether the deceased would be buried in one of these mines or in the cemetery at Stewart, Nevada.

A white man who has lived in the area for ninety years, reported that as a boy he often came across caches of belongings of dead Indians in the mountains.
[178] Today, prized possessions are either crowded into the casket with the body or burned or secreted in some remote area of the Sierra.

Funeral ceremonies were apparently simple. The body was wrapped and carried into the hills to be interred. Prayers in the form of a short speech were
[782] directed toward the dead. "We are burying you because you are dead. It's not because we are mad at you or don't like you. But you are dead. Please don't come back and bother us."

765 Widows traditionally cut their hair in mourning, a
[302] custom which is still practiced. Stewart reports that mourners painted their faces black. My informants
[178] denied this, but one elaborated: "I remember when I was a little girl old Indians who had lost someone would cry a lot and let the tears run down their faces
764 and not wash their faces until they were real dirty
● [626] and black with fire smoke." Crying at a funeral was expected and in fact positively sanctioned. At a funeral conducted while I was present the sheriff arrested a drunken Washo who was wailing quite loudly. The Indians were all bitter about this because: "All of us cry at a funeral whether we are drunk or not. That's
[627] the way the Washo do it." (This funeral was that of a murder victim and the sheriff was present because he feared there might be a reprisal attempt.)

A newspaper report of a funeral in Genoa, Nevada, in the late 1880's records that the Indians had borrowed a wagon from a white man to transport the corpse (that of a well-known Indian woman) to the burying ground. The wagon was followed by a large crowd of weeping mourners.

764 Modern funerals usually take place under the auspices
178 of a funeral director, and generally services are performed by a Christian minister from the Stewart
[797] Indian agency. After the white minister has left, it is usual for an older Indian to approach the casket and repeat the old funeral prayers. The reason for waiting until the minister leaves is to avoid hurting his feelings. My informants said the prayers made the
[768] older Indians feel more comfortable. It is usually not necessary to burn the deceased's home, but his be-
769 longings are disposed of. There is an increasing tenden-
178 cy to tend graves and put flowers on them. The cemetery at Stewart appears to be well decorated with flowers. Two old Indian graves near Lake Tahoe are regularly visited and jars of flowers placed on them.[1]

When the husband of one of my informants died,

---

[648]

[1]The concern for these particular graves may be in part motivated by the fact that they are a focal point in a Washo land claim. Because of California law concerning cemeteries, the Indians contend that the tourist camp presently on the site is there illegally and that the land is theirs. Thus far the camp operator has been enjoined from removing or desecrating the graves, but the Indians' claim has not been considered.

CHAPTER III

DISTRIBUTION

John C. Fremont made several contacts with the Washo Indians in January and February of 1844. He described a custom that reveals the essence of Washo economic distribution (Nevins 1956, 345-352).

"A party of twelve Indians came down from the mountains to trade pinenuts, of which each carried a little bag. These seemed now to be staple of the country, and whenever we met an Indian, his friendly salutation consisted in offering a few nuts to eat and to trade..."

And later "...when we reached a little affluent to the river at the bottom we suddenly found ourselves in presence of eight or ten Indians...Our friendly demeanor reconciled them and when we got near enough they immediately stretched out to us handfuls of pinenuts, which seemed an exercise of hospitality."

Gifts, as Fremont experienced, were part of everyday social intercourse among the Washo. Gifts were given in connection with births, puberty ceremonies, marriages, and deaths. As Fremont indicates, gifts also served to establish contact with strangers and to initiate trade.

In the quantitative terms of distributing total Washo production of goods and services, gift exchange was not very important. It was in the sphere of ideal values that gift exchange became important.

The value of sharing and of giving found expression in most of Washo economic distributions. Sharing (mib¢ shigihi) obtained at every level of Washo social organization. Sharing also decreased as kinship and residence distances increased. Non-Washo received the least of Washo sharing and yet Fremont and his party, although total strangers, were met with gifts and the invitation to trade. The person who would not share with others of the same household, or who was generally stingy (hut¢ tiki) would not be included in the networks of sharing and might be "talked out" of his household.

With various qualities of the transactions as our criteria, eight forms of economic distribution stand out in Washo society. These eight forms can be analysed in terms of the extent of "primary" and "secondary" social relations involved in each. Primary refers to relations between people with common goals and relations that are ends in themselves, intrinsically valued, "personal" in that the identity of the individuals cannot be changed without disturbing the relationship, "inclusive" in that the range or involvement

few puffs the weaker shaman would start to choke and would fall unconscious, perhaps with blood running from his nose. After a time the stronger shaman would call the weaker one's name and revive him; or, if this failed, the stronger one would sing the weaker shaman's wegelēyu song and shake his rattle over him. If, after three repetitions of the song, the weaker shaman was still unconscious, the stronger would blow water from his mouth onto the other's forehead. This apparently was always effective. Although Pete did not explicitly say so, the mechanism involved in this kind of shamanistic contest may involve the loss and return of the soul. The unconscious state and the bleeding nose are similar to the symptoms of the boy in the Welukáshkuah story, the two curing ceremonies have a common element in the calling of the unconscious person's name. Paralysis or unconsciousness and a bleeding nose are reported by Lowie in cases that probably involve soul loss (1939, 322-3).

721
754
756

Contests among shamans were held regularly and not always as part of the war pattern. Possibly they were a means by which shamans publicized their powers. Rupert reports that shamans were able to walk on hot coals and climb steep cliffs where there were no handholds. Rupert says a friend of his saw a shaman dance in fire and then vanish. According to Rupert, shamans also competed by magically shooting objects into one another. If a shaman failed to remove an object shot into him by another, it was understood that he was the weaker of the two. The stronger shaman would then remove the object, for contests among shamans were never a killing matter.

626
754

Both the threat of sorcery and the fear of an accusation of sorcery were important patterns of social control among the Washo. These patterns usually operated among nonrelatives. Anyone could hire a sorcerer to cast a spell on an enemy; therefore, an individual would try to avoid trouble with others, even with those who were not particularly formidable, for anyone could enlist aid. The activities of sorcerers were held in check because sorcerers were sometimes killed by angry relatives of the victim. If a sorcerer became particularly troublesome, the Washo might reach a kind of general agreement that he should be killed. According to Pete, even the relatives of the sorcerer might agree that this was necessary. The killing was sometimes by stoning and sometimes by other methods. The people who killed a sorcerer were not in danger from his ghost because ghosts bother only relatives. Rupert says he never heard of the ghost of a murdered man returning to trouble the murderer. Lowie's discussion of the measures taken to control sorcery (1939, 319-28) agrees with the statements of our informants.

Witches as well as sorcerers exist among the Washo. A sorcerer has active control over his wegelēyu, whereas a witch is an old person whose generalized power (not wegelēyu) has become fairly strong with age. Sorcerers

754
778
988 were active workers of malevolence; witches were hapless victims of a condition arising naturally from their age. However, this situation was obscured by the fact that older people were thought to be likely candidates for acquiring wegelčyu. Older people, therefore, were open to charges of sorcery; although innocent, an old person might be on the defensive knowing that he could inadvertently bewitch someone, especially a child or a young person. The belief that older people are more likely to acquire wegelčyu than younger ones is not supported by the testimony of our informants regarding the ages at which known shamans acquired power. Hank Pete's mother acquired her power before marriage, probably before the age of 15; Rupert acquired his as a young man.

626
762
775 Social control among relatives was based on a fear of ghosts rather than sorcery. Relatives who could not be influenced in any other way could be reached by an attempted suicide. The reason is clear: the dead person could become a ghost; hence he would be in a position to threaten the life of his living relatives. The usual method for an attempted suicide was to eat wild parsnip. The poison acts slowly and gives plenty of time to save the victim. The Washo force an emetic down the person's throat and he vomits up the poison.

626
762
[837] The four examples of attempted suicide recounted by our informants were definite attempts at resolving family problems. In one case, a man had been having difficulty with his wife; she was interested in another man. The husband ate wild parsnip, but was saved. As a result his sons brought pressure on the wife and made her behave. The couple stayed together until the
[593] husband died. A second case involved trouble between a brother and sister. The sister had been taking money from the parents, and the brother objected. The girl threatened suicide and the boy said, "Go ahead -- I don't care." The girl took wild parsnip, but not enough to kill her, and she was saved. The parents were very happy to have her revived. After this episode, the son left
[461] home. In the third case a man never wanted to work, and his mother and sister didn't like it. He attempted suicide by hanging, but the rope was too long and his feet touched the floor. A relative cut him down. The suicide attempt frightened his mother and sister and they stopped complaining. The fourth case concerned a woman. Our informant didn't know the reason for her attempt to kill herself, but commented, "It's always family trouble."

762 Our informants described four cases of successful suicide. Of these, three had no connection with social control. One was that of a helpless old man who lived alone and had no relatives. On a return trip from California where the Washo had been gathering acorns, he asked to be abandoned. Another successful suicide was a woman who had lost a daughter whom she loved very much. She ate wild parsnip and died in three hours. The third case, which is probably apocryphal, concerns a shaman who tried unsuccessfully to

762
cure his wife. When she died, he broke the taboo against eating salt and died. [263]
The fourth successful case did involve an attempt at social control. A father [784]
and daughter did not get along because the daughter was supporting the father. [626]
The daughter complained and the father threatened suicide. He repeated the
threat a day later and the daughter told him to do whatever he wanted. The
father took his gun and shot himself below the chin. This method of suicide
is not typical and was clearly inappropriate, because it gave the daughter no
chance to change her behavior.

Hank Pete says that he has heard many threats of suicide and that peo- 762
ple do this, "to scare money from old parents." Pete also says that men at- 626
tempt suicide more often than women, who just leave home when interpersonal 562
difficulties arise. The destruction of the self is an ultimate threat, and the
fact that men are more likely to invoke it than women indicates a lack of male
authority in Washo culture. This same characteristic of the male role was
revealed in an analysis of role behavior by kinsmen among the modern Washo.
"... Men tend to see their relationships regarding who dominates them as
clearly structured, but are much less clear as to whom they dominate; women
see their relationship with subordinate relatives to be structured almost as
clearly as their relationships with dominant ones. This may be an indication [157]
that Washo males tend to lack self-confidence...." (Freed, 1960, 370). We
believe that the lack of male self-confidence is a modern phenomenon and can- [157]
not be projected into the past. The reason probably is that males have a more
difficult time adjusting to modern conditions than women. This has been noted
in other American Indian hunting-gathering tribes (Hallowell, 1942, 48;
Caudill, 1949, 425). In the case of the Washo, the main difficulties of the men
may be due to seasonal unemployment and lack of economic opportunities. Of
the five cases of violence against the self involving attempts at social control,
three were by men; of these three, two were motivated by complaints by wom-
en that a male relative was making no economic contribution.

We suspect that among the modern Washo the use of alcoholic beverages 762
has partially replaced the threat of suicide in interpersonal relations. Bertha 273
Holbrook commented, "Nobody commits suicide today -- instead they begin 177
drinking." Alcohol probably has many functions in modern Washo culture; its 626
role as a means to control the behavior of relatives is possibly a minor one.
If the control of relatives is one of the functions of alcohol, its effectiveness
is based on different culture patterns than is the effectiveness of suicide. Sui-
cide controls through the fear of ghosts; drinking may control through fear of
the direct aggression of the drunken person, especially because the Washo be-
come hostile and aggressive when they are drinking. It is possible that a per-
son may die from overindulgence in alcohol or may be killed in a drunken
brawl and thus become a ghost, but this is infrequent and therefore a minor
consideration.
